

Measuring Guide Worksheet

This is a worksheet to help with measuring, please fill out and then go online or call us to place your order

To measure for replacement cushions, the customer must remove the cushions from the frame. We do not measure the old cushions as they can be out of shape.

For seat cushions: Measure the cushion area of your frame from left to right. Example: if the area is 72" wide, we will make (3) 24" cushions. Next, measure how deep you want your cushions. We suggest adding 1/2" so your cushions overhang from the front of your frame and your legs rest against the cushion instead of the frame. Next, measure from the floor up to the frame where the cushion will sit for seat deck height. Finally, tell us if the back corners are square or round.

For back cushions: Measure from the bottom of your frame how high you want your cushions to be. Subtract the seat thickness from the back height before entering your number. Then tell us if you want the outside corners square or curved.

You can choose the seat thickness of these cushions, we offer 4", 5" or 6". Please note these cushions are specially made to fit your furniture and are not returnable.

Seat Cushions								Back Cushions	
Item	QTY	Width (across front of seat)	Width (across back of seat before curve)	Depth	Seat Cushions Corner	Thickness (4", 5", 6")	Seat Deck Height	Back Cushion Corner (the top of cushion)	Height
Sofa					<ul style="list-style-type: none"> • Square • Curved 			<ul style="list-style-type: none"> • Square • Curved 	
Loveseat					<ul style="list-style-type: none"> • Square • Curved 			<ul style="list-style-type: none"> • Square • Curved 	
Chair/ Rocker					<ul style="list-style-type: none"> • Square • Curved 			<ul style="list-style-type: none"> • Square • Curved 	
Ottoman						Choose 3", 4", or 5"
